

Weight

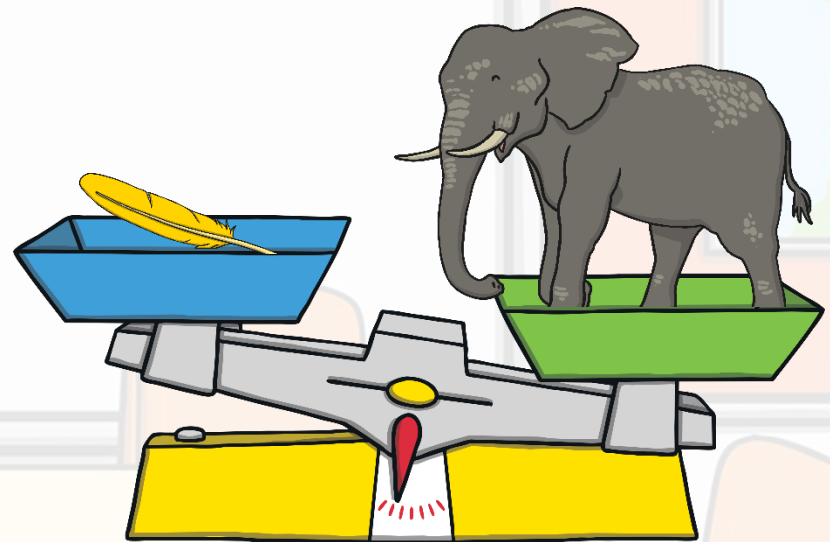

What Is Weight?

Weight is how heavy something is.

Some things are really heavy, like an elephant.

Some things are really light, like a feather.

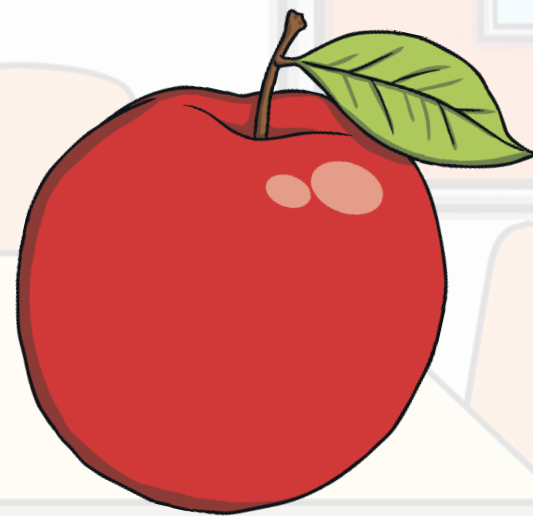

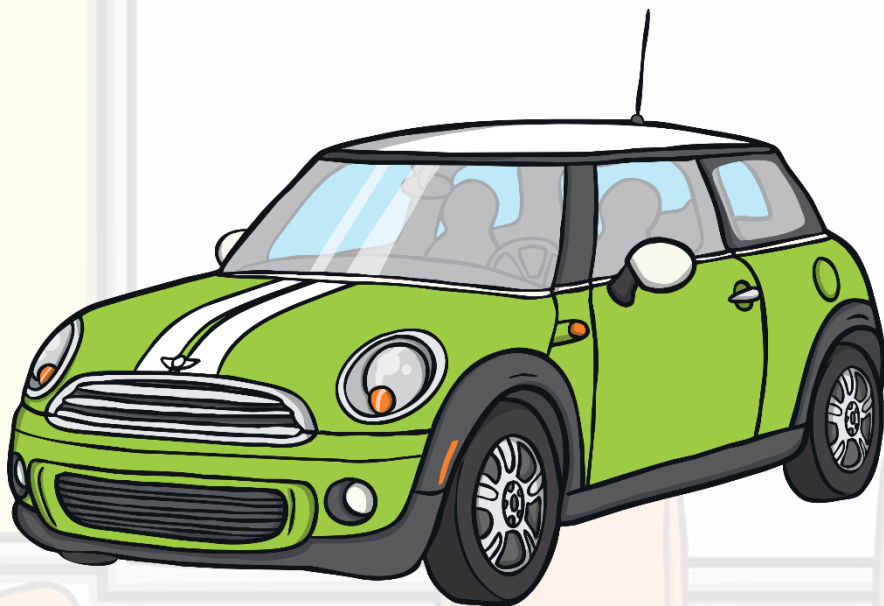

Weight is measured using a balance or scales.

Have a look at the next few slides and see if you can identify which object is heavier and which is lighter.

Weighty Words

We use lots of different words when we talk about weight. Can you think of any more?

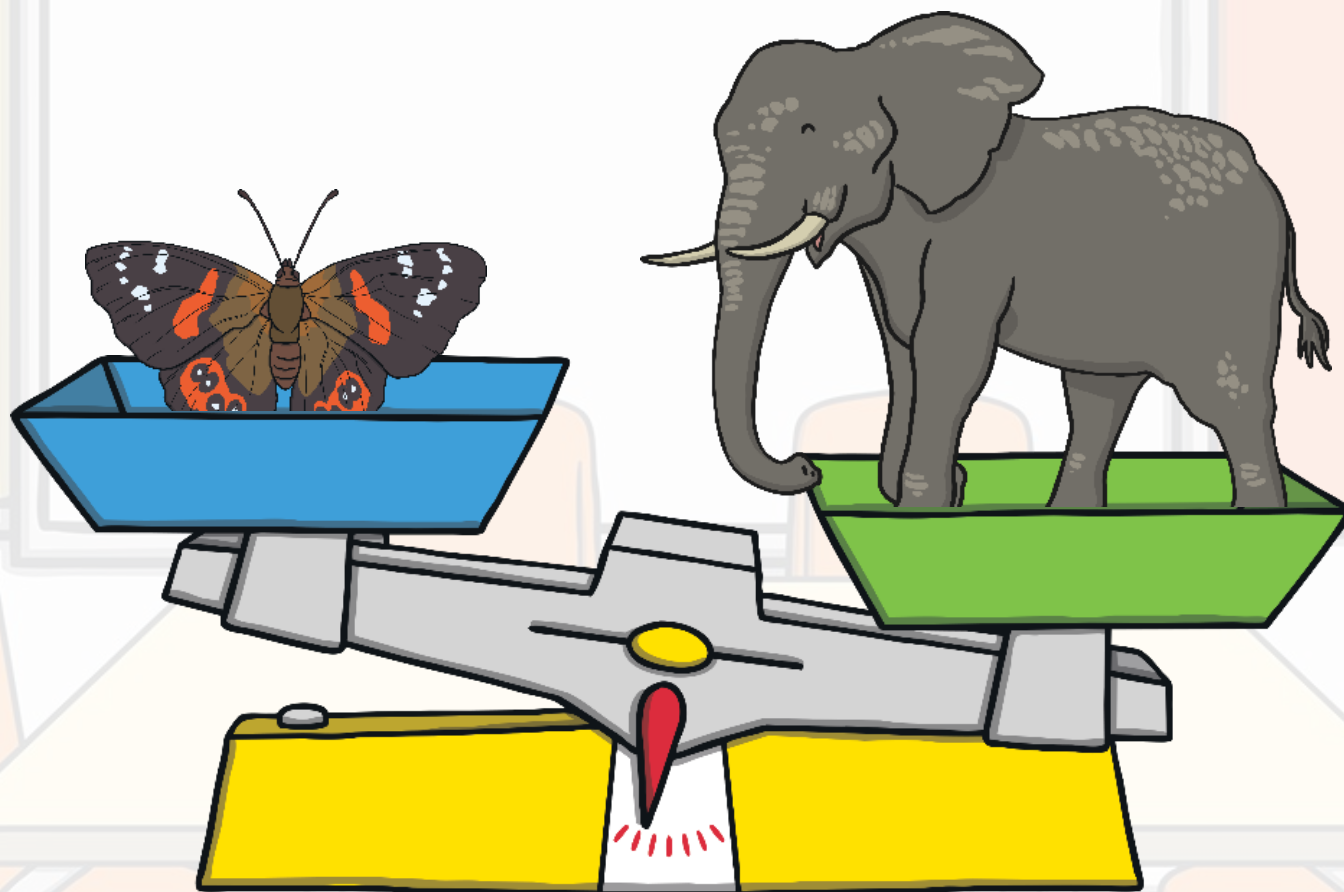

Balance

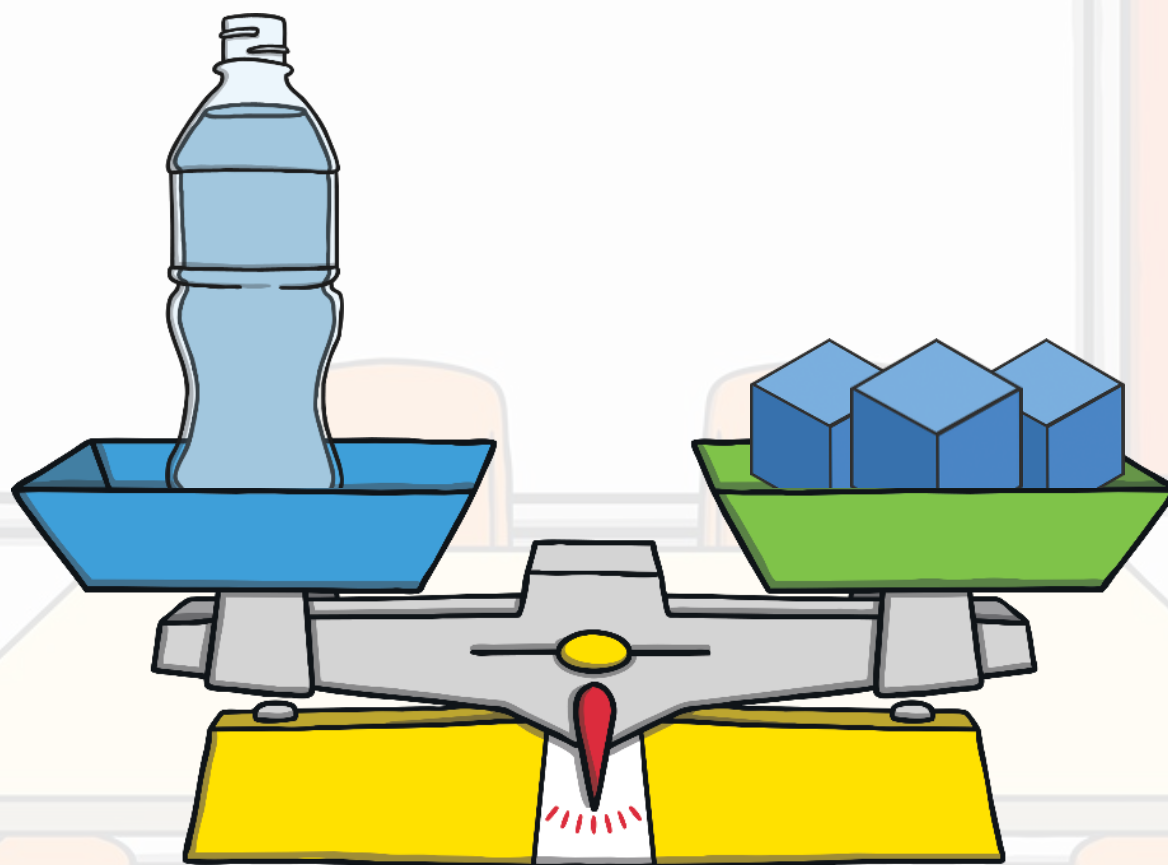

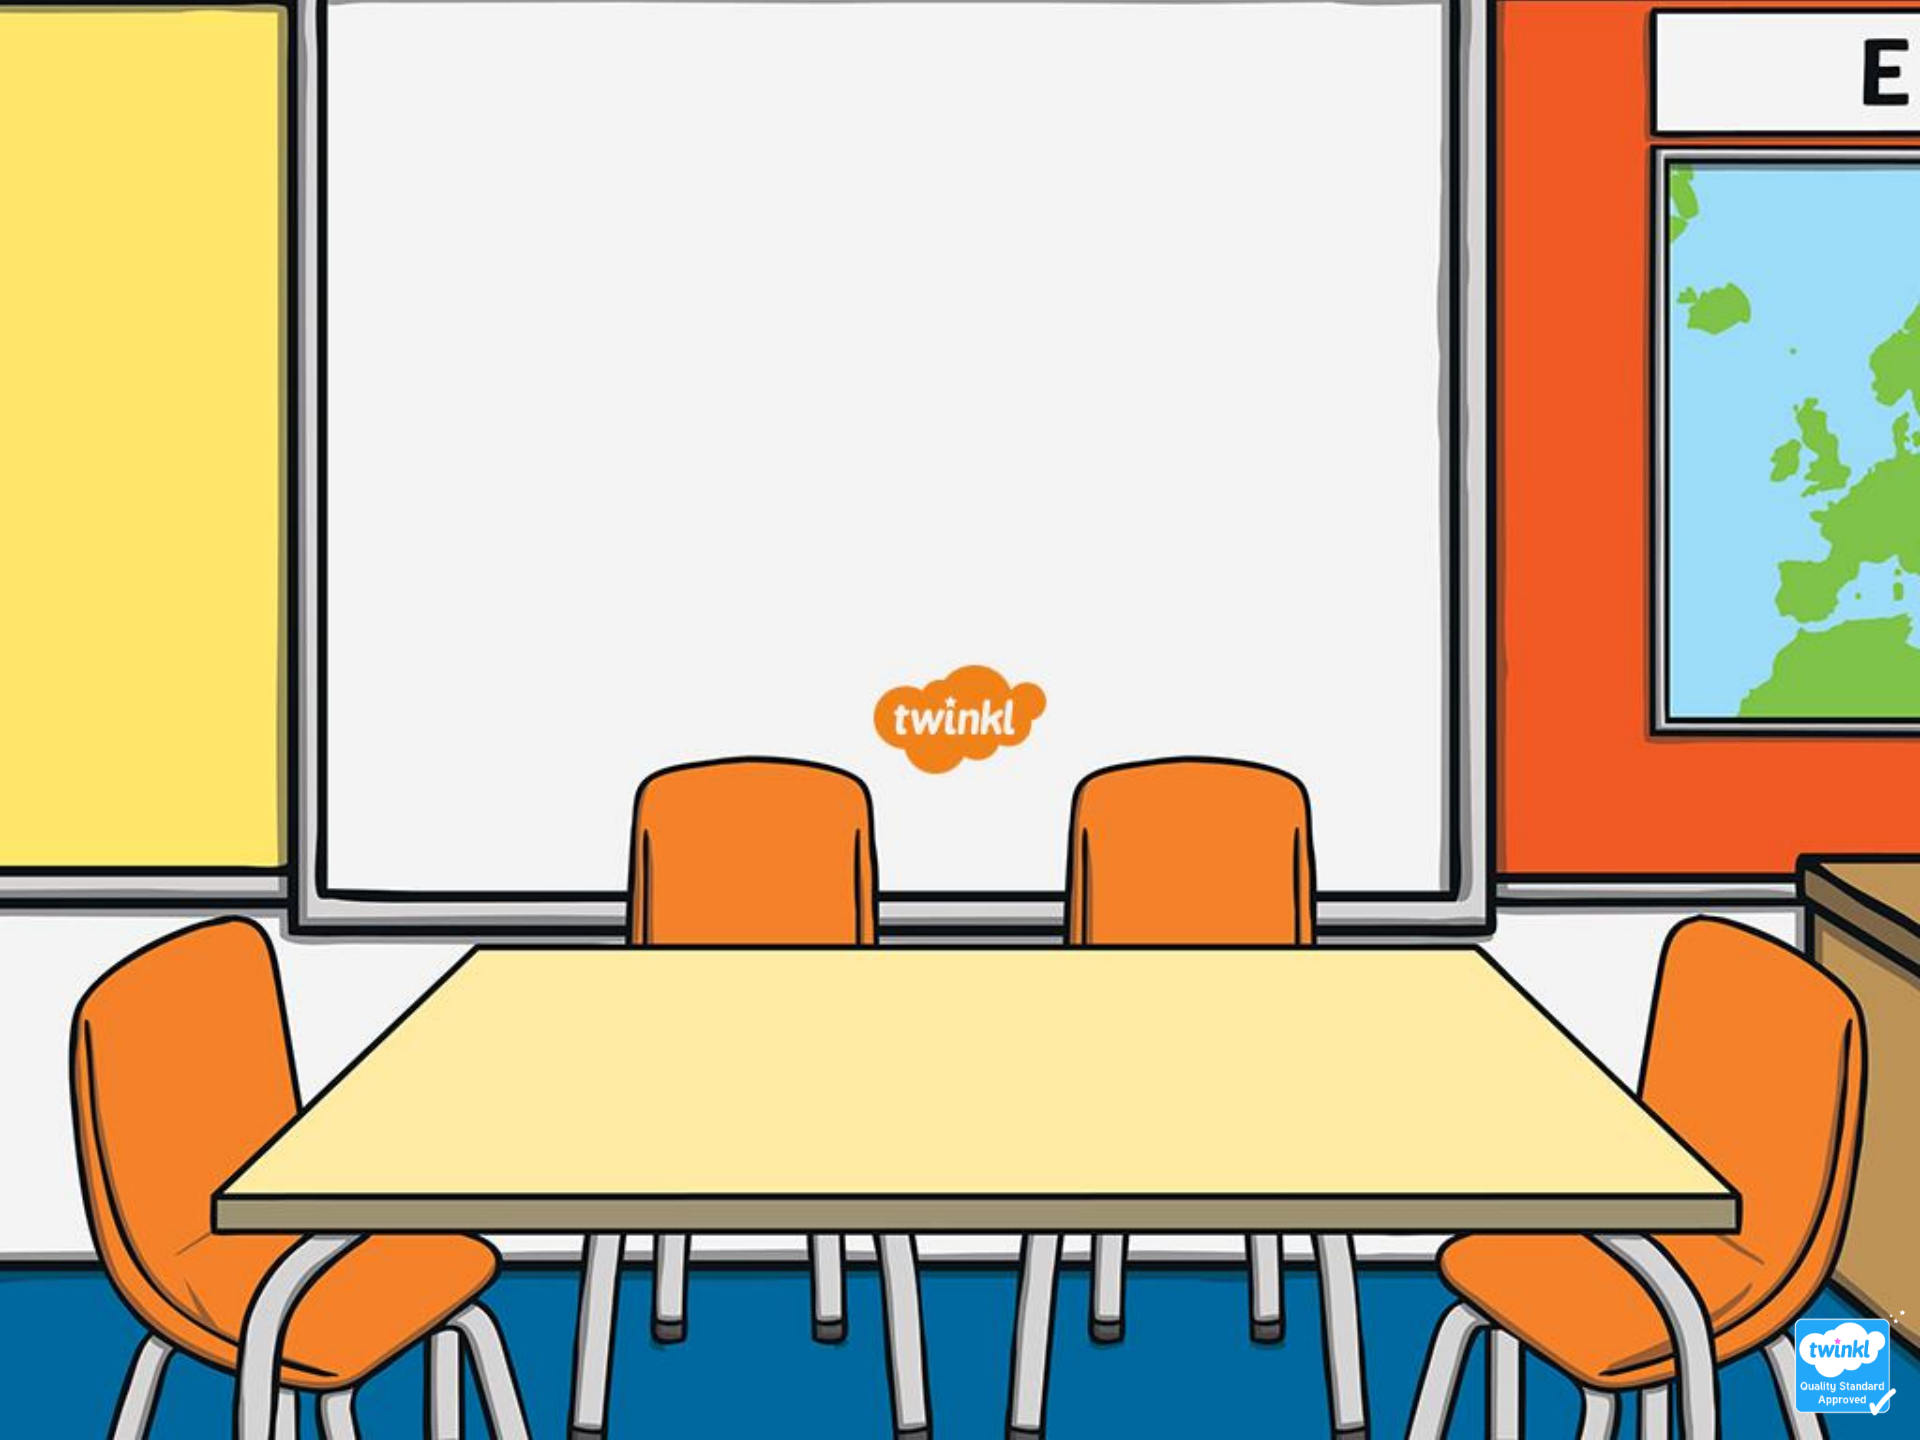

We use balances to measure weight.
